Bailey Smith

Forward Deployed Engineer (in training) | AI evaluation and agentic systems

Hastings, MN - open to remote • (651) 208-0000 • heybaileysmith@gmail.com • linkedin.com/in/bailey-smith-mn

Summary

I run live operations for a living. As a casino table supervisor I keep four live tables running at once, up to $500,000 in chips, correcting errors and handling disputes with the people in front of me. I bring that same discipline to AI: I build agent systems, make them check each other, and verify every answer against evidence before I trust it. I'm in Codecademy's agentic AI bootcamp, working toward forward deployed engineering: scope the customer's problem, build the fix, verify it works, and explain it plainly.

Skills

Customer delivery: live client-facing operations, correcting errors on the spot, de-escalating disputes, supervising dealers, written feedback, strong spelling and grammar, independent remote work

AI systems: Claude Code, AI agents and multi-agent workflows, MCP server, Ollama and local models, prompt engineering, LLM and generative AI response evaluation

Evaluation and quality: rating AI answers against rubrics, hallucination detection, fact-checking, checking records and paperwork against procedures, Microsoft Excel

Engineering tools: Python (beginner), pytest, SQL (Kaggle certified), SQLite, Git, GitHub CLI, PowerShell; machine learning basics (bootcamp)

Domain and license: casino table games and procedures, restaurant management, construction; tribal gaming license (passed background check)

AI Projects

Built with Claude Code: I wrote the specs and reviewed and tested the output.

AI agent crew | *Claude Code subagents, Ollama* 2026

Problem: A single AI answer can sound right and still be wrong.

- A team of AI agents with set roles (coordinator, skeptic, researcher, code reviewer) that challenge each other's work, using an adapted open-source "LLM council" method: five AI advisors, anonymous peer review, and a chair's verdict.
- Every answer is checked against evidence before I accept it.

AI output review | *Resume-Matcher, Ollama* 2026

Problem: An open-source AI resume tool was supposed to tailor resumes to real job postings.

- Ran it on five real job postings and checked every output line by line against my real resume.
- Caught it inventing a language, a certification, and an award, and rejected every rewrite it produced.

Open-source vetting pipeline | *PowerShell, Git, GitHub CLI* 2026

Problem: Unvetted open-source tools entering a working environment.

- A gate that blocks every open-source tool until it is sandboxed and security-scanned.
- 60 repositories checked so far.

Experience

Treasure Island Resort & Casino, Welch, MN Jan 2025 - Present

Dual-Rate Dealer / Supervisor (table games)

- Run payouts and procedures across four live tables at once, up to $500,000 in chips, catching and correcting errors in real time.
- Supervise dealers and correct their work on the spot; verify fill and credit paperwork and records, including Excel.
- Keep the table calm, compliant, and professional through big wins, losses, and disputes.

Handles, San Diego, CA Jan 2022 - Aug 2022

Manager

- Led the team, ran inventory controls, and prepared daily profit, inventory, and safe-count reports.

Earlier experience: Foreman, H-1 Construction, Honolulu, HI (2018); Server, Bungalow, Lakeland, MN (2015 - 2018)

Education

Codecademy Sep 2026 - Nov 2026

Building Agentic AI Applications bootcamp

San Diego Mesa College, San Diego, CA 2023 - 2024

Architecture coursework; GPA 3.6, Dean's List

Century College, MN

Associate of Arts coursework

Certifications

SQL Certificate | *Kaggle* Oct 2026
